WATCHES

COLLECTION DESCRIPTION 2011

TIME FOR PARTY: 2009 THE THOMAS SABO WATCHES COLLECTION

Over the past few years, the demand among our customers for THOMAS SABO Watches has become ever greater. And as watches are actually an obvious complement to our jewellery collections, we decided to fulfil this frequently-uttered request.

It is for this reason that THOMAS SABO will be tapping into a new market segment in 2009: with a newly-developed, autonomous watch collection, we are closing the wrist-accessories gap and are – along with the Charm Club Collection and the Sterling Silver Collection – presenting one of the market's strongest overall concepts.

And we are launching the collection with a staggering 59 different models – from basics through to sports, from chronographs all the way through to the most elaborate designs. The new collection is split into three ranges: Rebel at heart, It Girl and Classic. Each range draws on, and presents, the design elements of the corresponding jewellery lines from our Sterling Silver Collection. The new mixed with the familiar. Autonomy with togetherness.

With our high-quality watches, we are particularly focusing on the fashion sector. The new collection therefore represents the continuation of the typical THOMAS SABO design codes within a new segment. It carries on what we have been celebrating with the Charm Club Collection and Sterling Silver Collection for quite some time now: enjoying fashion and taking pleasure in jewellery and accessories.

We wish you many happy hours with our watches!

Thomas Sabo

WATCHES

2009 COLLECTIONS

Rebel at heart Collection

Rebel at heart has transferred its Rock 'n' Roll, dusky design language to the new watch collection for men and women: black dominates – skulls, Chinese dragons and cross motifs adorn the dials and straps and bracelets as familiar and recognisable symbols.

The striking symbols have been applied three-dimensionally to both dials and the straps and bracelets; zirconia sparkle on bezels and high-end materials round off the superlative design. All evidenced by two important THOMAS SABO principles: attention to detail and a very high standard of quality.

The THOMAS SABO Watches are contemporary and pioneering accessories, a coherent extension to any Rock star's outfit. They are not to be conceived as status symbols, but as awesomely-cool statements for the rebellious.

It Girl Collection

The It Girl Collection of watches is the exclusive preserve of the woman. They have been designed as chic accessories for the wrist with their extreme femininity and total dedication to glamour. Any woman checking the time can now also admire a true fashion statement in the process. Major glamour impact for major events. In the limelight, these watches can only be described as bling-bling: bezels with sparkling diamond-cut zirconia, mother-of-pearl dials with small rotating Eiffel Towers or a radiant sun as the small-second hand.

Light, pink, white and black sparklers, satin and silicon rubber: Sparkling Girls conquer the high street and the dance floor.

Even in its first watch collection, THOMAS SABO is presenting two full-ceramic watches, currently the absolute must-have accessory. This exquisite material in shiny black and shiny white transforms sports watches into fashionable watches.

Classic Collection

The Classic Collection is now beautifully rounded-off by the new THOMAS SABO Watches Collection. For men and women, with jeans, suit, tuxedo or evening dress – their timeless design makes them the perfect companion for everyday life.

The watches are convincing with their elegance. The clear, graphic design language promises to go down in the annals of history. The Classic Collection watches are accessories predestined to create their very own piece of history. The wrist is about to become the new calling card. The outfit will be transformed into a style commitment. Loving to see and be seen.

TIME FOR ADVENTURES! 2010

Following the successful launch of the THOMAS SABO Watches Collection last year, we are now unveiling a new model range: novel styles for urban adventurers continue the success story.

The new inspiration: "Time for Adventures", cool city style-icons celebrate modern jet-setting and clubbing. Hot spots are their territory, speed and adrenalin their engines. They conquer the world's capitals of fashion with their cosmopolitan, free and courageous style.

The THOMAS SABO Watches are oriented on the successful Sterling Silver Collection and are veritable fashion accessories as a result of the must-have colours, the innovative designs and highlights such as the new, square case shape. As a result of the related topic worlds, the watches and jewellery from THOMAS SABO can be perfectly combined with each other – for even greater individuality and style.

2010: "Time for Adventures"! The countdown is on!

Thomas Sabo

WATCHES

2010 COLLECTIONS

Rebel at heart Collection

Cool urban heroes are now putting the pedal to the metal: they are conquering the urban jungle, living their very own rebellious lifestyle. No time for half measures – standing up against the mainstream with true style and a Rock 'n' Roll attitude. The Rebel at heart 2010 line is just as unconventional as the modern rebels of the world's fashion capitals.

An absolute highlight is the new, square case shape – in trendy colours and styles, for example with a two-part leather strap in a cool antique silver look. And the existing success models have been reinterpreted: they now also appear with jewellery symbols such as the bull's head and the lily cross rivets. A real statement for the "rebel" in you!

It Girl Collection

The city is their catwalk, the dance floor their home: It girls are hip style queens and know exactly what they want, creating trends rather than following them.

Always being at the vanguard of trends and celebrating style and fashion at the same time. Fuchsia, orange and aqua are the new summer colours, which can casually be combined with the matching jewels from the Sterling Silver Collection. It's a colour dream!

The classic Black & White is also a magnet for compliments. The watch as an item of jewellery – whether combined with a sexy cocktail dress or some designer skinny jeans: this is the sophisticated look of today's It girls!

Classic Collection

The Classic Collection is now beautifully rounded-off by the new THOMAS SABO Watches Collection. For men and women, whether in jeans, a suit, a tuxedo or an evening dress – their timeless design makes them the perfect companion for everyday life. The watches are convincing with their elegance. The special feature: the THOMAS SABO branding all around the bezel.

The Classic Collection watches are accessories predestined to create their very own piece of history. The wrist is about to become the new calling card. The outfit will be transformed into a style commitment. Loving to see and be seen.

TIME FOR POP

2011

POP, this is the radiantly-colourful world of the popular, of Pop music, of Pop Art and of Pop culture. A world full of opposites and contrasts, full of power and joie-de-vivre, full of idols and icons. Pop is popular – just like the world of THOMAS SABO with its international fan community. To this end, the Watches Collection once again sets completely new standards, this time with the topic of Pop: this is where candy meets couture, Rock ‘n’ Roll meets neon and the classic meets colour. The new watches are extraordinarily colourful and wonderfully expressive – they can be perfectly combined with the Pop pieces in the Sterling Silver and Charm Club collections and are a step ahead of the contemporary zeitgeist – each and every second of the day.

Thomas Sabo

WATCHES

Materials

1. Stainless steel

Stainless steel is an extremely robust material with high degree of hardness. Therefore, it is more resistant to scratches and other wear and tear than silver, for example. Stainless steel does not rust and is particularly durable.

2. Embossed leather (cowhide)

As one of the classic materials for straps, leather is also presented in the various THOMAS SABO Watches Collection lines : in a stylish alligator look but also with a wide, embossed cross pattern. Padding in the strap ensures optimum comfort.

3. Ceramic

Ceramic is a particularly exquisite and high-quality material. The high-end It Girl Collection models shimmer as a result of this material. And ceramic is not only stunning to look at, it also offers other benefits: it is around 30% lighter than stainless steel, feels warmer on the skin and is particularly scratch-resistant.

4. Silicon rubber

The sporty watch straps made from silicon rubber stand out in terms of their water resistance, toughness and comfort. They are easy to clean and their temperature is always pleasant. The deep-embossed lettering on the outer and inner sides is a real eye-catcher and increases recognition.

5. Synthetic material

Synthetic material – the embodiment of the age of Pop and simultaneously the universal material for all aspects of life! Whether creatively deployed as a Pop culture material in art, design and lifestyle products or in medicine, the aerospace sector, the automobile industry, communications and also in sports, synthetic material has diverse, universal applications and is present in virtually all areas of our everyday lives. As a material in watches, it allows us to use bright, radiant colours, while feeling light and pleasant against the skin.

6. High-tech Polycarbonate

High-tech for the wrist! High-tech polycarbonates are impact-resistant, scratch-insensitive and UV-resistant. In their colourless form, they are used in safety lenses, special optical devices, CDs, as materials in the aerospace industry as well as in police and emergency service vehicles. Due to their stable properties, they are excellently suited for use in watches.

7. Ion-plating

Ion-plating is a stainless steel plating process. This is a top-quality coloration of the stainless steel surface that is particularly durable and resistant to external influences. The result of the ion plating coating can barely be described as merely "plating", as it offers virtually the same properties as a colouring integrated into a stainless steel surface with its particular hardness and adherence. Ion-plating in matt black perfectly complements the Rebel at heart Collection designs for gentlemen, and the shiny polished finish adds a sparkle to the ladies' models.

8. Hardened mineral glass

The watch's dial is protected by a hardened mineral glass. The additional sapphire coating increases the glass's hardness and ensures a resistance to scratches that verges on that of a sapphire glass. Furthermore, the glass is non-reflecting, ensuring it can be read even in extreme light conditions.

Thomas Sabo

WATCHES

Movement/function

1. Quartz movement

All THOMAS SABO watches are equipped with a quartz movement powered by a battery. One benefit of the quartz movement is its high degree of accuracy. THOMAS SABO uses Miyota quartz movements. Miyota is a subsidiary of Citizen and is a high-end movement manufacturer. Miyota movements are also used in such brands as Armani.

2. Chronograph

Chronograph is the description for a watch with an additional stop watch function. A chronograph measures various time intervals with the help of sub-dials, so-called counters. The large second hand functions as the stop-second.

3. Sports watch

A sports watch has a rotatable bezel (external ring on the casing) with a minute scale for marking start times, as is required in diving sports, for example.

4. Closing systems (pin buckle and butterfly clasp)

There are two closing systems used in the collection: the butterfly clasp and the pin buckle. With its two wings, the butterfly clasp offers additional security, as the watch cannot fall off the wrist in the event of unintentional opening.

Special Features

1. Sunray dial

The "sunray" look dial provides a particularly beautiful sheen. Light flickers across the surface of the dial like the rays of the sun. This effect is achieved by the delicate grooves on the surface which playfully reflect light.

2. Luminous hands

Luminous lacquer is applied to the hands to allow the watch to be read even in total darkness. The luminous hands absorb daylight and continually emit light in the dark.

3. Embossed case backs

The backs of THOMAS SABO watches are also beautiful. An elaborately-embossed logo adorns the case backs and – in addition to the fabulous design – also offers wearers information on the material and water resistance.

4. Symbol language

a. Eiffel Tower: The Eiffel Tower as a homage to the city of love, Paris, where time passes a little differently.

b. Sun: The symbol of life, joie de vivre and optimism par excellence.

IT GIRL

Life is a candy shop. The It Girl line is dominated by cheerfully-sassy plastic Pop in bright bubble-gum colours. Glowing yellow to juicy orange, bright green and hot pink all the way through to radiant blue perfectly describes the colour palette of the new must-have Plastic Pop Watches with their stainless steel bezels and aluminium inlays. But the collection also includes leather, silicon rubber and polycarbonate straps and bracelets in lots of intensive fashion shades and exude cheerfulness and sexy Sixties glamour. Absolutely perfect for all those IT Girls who live life in the fast fashion lane and love making a personal statement!

REBEL AT HEART

Graffiti art, underground culture and fluorescent light paintings are the Pop inspirations for the Rebel at heart Watches – and neon coloured accents are the focus of the moment. Contrasting with black silicon rubber straps and black dials, the glowing neon-green, neon-yellow and even neon-pink indices and hands all lead the way into a new age. Time for WOW factor: ceramic bezels combined with polished stainless steel and classic leather make a strong statement on any wrist.

CLASSIC

This season, subtle Pop Art interpretations are also part of the otherwise clean, urban Classic line. Leather straps in radiant white, elegant taupe and even striking fuchsia coupled with classically-round case shapes and shimmering mother-of-pearl dials provide that little extra for any classical business outfit. And the new seductive coolness of the Classic Watches also provides a visually-refined addition to festive eveningwear and playful cocktail dresses. A contemporary take on style and fashion awareness.
